PROBLEM 150M outpatient procedures annually · Patients recover at home with minimal supervision · Complications detected too late · ~$60B downstream burden

SOLUTION

Physician-Prescribed AI for Post-Operative Recovery

RecovryAI's physician-prescribed Virtual Care Assistants fill the critical supervision gap between discharge and full recovery.

- Daily patient engagement during recovery
- Monitoring of recovery indicators
- Personalized indication-specific recovery guidance
- Escalation of concerning signals to care teams
- Orthopedics first; expanding to all procedure domains

THE FIRST PRESCRIBED AI PLATFORM

AI that physicians prescribe directly to patients as part of clinical care, continuously monitoring recovery and escalating complications to licensed providers.

OPPORTUNITY

$320B annual post-acute care

- **150M** outpatient procedures annually
- **30-day+** recovery window per procedure
- Activation is less than **<$50** per recovery episode

REQUIREMENTS FOR PRESCRIBED AI

Providers cannot deploy patient-facing clinical AI without:

- FDA Authorization
- Clinical Validation
- Clear Reimbursement Pathway
- Liability Clarity

BUSINESS MODEL

1x activation + RTM billing

- Financially positive for providers from day one
- Activation fee **<$50** per patient
- RTM reimburses up to **~$469** per episode
- Later: VCAs support CMS value-based care initiatives

EARLY VALIDATION

FDA engagement since 2024 through numerous Pre-Submissions

- Pursuing FDA De Novo SaMD Classification
- FDA Breakthrough Device Designation
- Pivotal clinical trials underway
- Physician-adjudicated validation of VCA clinical recommendations
- Encouraging Pilot Study outcomes
